

## revealing presence

Revealing Presence is a land-based Augmented Reality project taking place on the unceded lands of the Lekwungen speaking peoples, now called Victoria BC. The project aims to make visible the stories and histories of peoples and events from the past, which continue to affect our relationships to the land and to each other.

Five artists – Kemi Craig, Lindsay Delaronde, Colton Hash, Eli Hirtle and France Trepanier – have created works at specific locations, revealing the stories and unheard voices of these places.

All of these works can be viewed on compatible phones or tablets by using the Adobe Aero app and scanning the QR codes which can be found inside this pamphlet or on FLUX Gallery's website: [www.fluxmediagallery.org](http://www.fluxmediagallery.org).
